***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on February 9, 2004, has been entered.

No amendments have been filed; claims 1 and 4-40 remain pending in this application.

***Priority***

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Applicants' Priority Document was filed on March 29, 2002.

***Allowable Subject Matter***

3. Claims 1 and 4-40 are allowed.

***Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance:

Art Unit: 1755

The prior art of record does not teach or suggest the claimed catalyst for decomposing an organic halide, comprising 1 to 30 wt. % of a water-insoluble vanadyl sulfate, 20 to 70 wt. % of at least one oxide comprising one of titanium and niobium, and 20 to 70 wt. % of at least one sulfate comprising at least one atom selected from the group consisting of calcium, barium, strontium, and lead, wherein the sum total of the aforementioned components equals 100 wt. %.

Umemura et al. (U. S. Patent No. 4,225,462), while teaching a water-resistant catalyst comprising barium sulfate and water-insoluble vanadium (IV) oxide sulfate, do not teach or reasonably suggest the presence of an oxide of either titanium or niobium.

Imanari et al. (U. S. Patent No. 4,378,338) teach a catalyst comprising at least three components of titanium, vanadium, and magnesium, and, optionally, tungsten, wherein the titanium and tungsten are present as oxides, and the vanadium and magnesium are present as oxides or sulfates. See col. 2, line 60 to col. 3, line 36 of Imanari et al., which also discloses percentages of the titanium and vanadium components comparable to that instantly claimed.

However, while Imanari et al. teach the presence of additional components such as barium, strontium, calcium, and beryllium, as well as niobium, presumably as oxides or sulfates (col. 5, lines 33-46), the percentage amounts of these components is not more than 1% by weight or less (for barium, strontium, calcium, and beryllium, see col. 5, lines 36-41), and 3 % or less (for niobium, see col. 5, lines

Art Unit: 1755

43-46). These percentage amounts fall outside the claimed range for the "at least one sulfate comprising at least one atom selected from the group consisting of calcium, barium, strontium, and lead", as recited in the instant claims.

Thus, even though this reference teaches comparable amounts of vanadyl sulfate and titanium oxide (and for a combination of titanium oxide and niobium oxide), the reference does not teach or reasonably suggest the claimed amount of at least one sulfate comprising at least one atom of calcium, barium, strontium, and lead.

Japanese Patent No. 61-204040 (Applicants' submitted art) discloses a catalyst for purifying nitrogen oxides, consisting of water-soluble vanadyl sulfate, barium sulfate, and titanium compounds (e.g., titanium dioxide as a titanic acid source). This reference does not teach or suggest **water-insoluble vanadyl sulfate**, as instantly claimed.

Lester (U. S. Patent No. 5,292,704, also Applicants' submitted art) discloses a catalyst for converting or destroying organic compounds, said catalyst comprising titania, vanadium oxide, tungsten oxide, tin oxide, and at least one noble metal selected from the group consisting of platinum, palladium, and rhodium, such that the vanadium oxide, tungsten oxide, and noble metals are uniformly dispersed on the titania. While this reference teaches vanadyl sulfate as a suitable source of vanadium oxide (col. 4, lines 53-65), this reference does not teach or suggest the presence of vanadyl sulfate in the catalyst. Further, this reference does not teach or

Art Unit: 1755

suggest the presence of sulfates of at least one of calcium, barium, strontium, or lead, as required and recited in the instant claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
